# Aetheria Academy of Resonance and Weaving

# Course Catalog

## Aetheria Course Catalog (2026-2027)

This catalog details the academic curriculum required for all students to achieve full Weaver status.

### ALCHEMY & ELIXIRS (Alchemist Vane)

Located in the Sub-Levels. This course teaches the subtle science and exact art of condensing raw Aether into liquid form.

### Year 1: Fundamentals of Suspension

Students will learn to safely handle base liquids and stabilize volatile ingredients. You will brew the Elixir of Minor Focus and the Draught of Warmth.

- Required Materials: Brass crucible, crystal stirring rod, standard protective goggles.
- Grading: 50% practical brewing, 50% theoretical exams.

### Year 2: Reactive Properties

Understanding how different aether-states interact. You will learn the Antidote to Common Paralysis and the Swelling Solution. Warning: Do not mix these two together.

- Prerequisite: Grade of 'Acceptable' in Year 1.

### Year 3: Advanced Catalysts

Introduction to rare ingredients such as Void-Dust and Star-Sap. Students will attempt the complex Elixir of Temporary Invisibility.

- Grading: Includes a mid-term practical where you must reverse a botched potion.

### Year 4 & 5: C.R.A. Preparation

Focus on the 12 core elixirs required for the Core Resonance Assessments. Includes extensive safety training for handling highly toxic fumes.

### Year 6 & 7: M.A.T. Level Alchemy

Only students who achieve 'Outstanding' on their C.R.A. may proceed. This covers theoretical elixir creation, philosophical implications of life-extension draughts, and independent research projects.

## MATTER SHIFTING (Master Weaver Elara Celes)

The most complex and dangerous resonance you will learn at Aetheria. It requires complete mental focus and an absolute understanding of atomic structure.

### Year 1: Basic Alterations

Changing the physical properties of small, inanimate objects. Turning copper wire into pure light, or changing the color of a wooden block.

- Required Materials: A fully calibrated Aether Conduit.

### Year 2: Organic to Inorganic

The first steps into complex shifting. Turning a leaf into a silver coin. Students must demonstrate control over the shifting process to ensure the object does not get 'stuck' halfway.

### Year 3: Inorganic to Organic

Much more difficult. Creating a living flower from a glass cup. The focus is on ensuring the resulting organic matter is stable.

### Year 4 & 5: C.R.A. Preparation

Mastering shifting of medium-sized objects and basic vanishing weaves (sending an object into temporary pocket-space).

### Year 6 & 7: M.A.T. Level Shifting

Human shifting. Altering your own physical appearance safely without causing permanent genetic damage. Highly dangerous. Strict supervision required.

## DEFENSE AGAINST VOID ANOMALIES (Instructor TBD)

Learn how to defend yourself against Void creatures, disruptions, and entropic fields.

### Year 1: Basic Shielding

Creating a kinetic barrier to deflect minor physical and aetheric attacks. Identifying the signs of a localized void-rift.

### Year 2: Creature Identification
Studying the behavior of Null-Stalkers, Shadow-Lurkers, and Echo-Phantoms. Learning the specific frequencies that repel each entity.

### Year 3: Counter-Weaving
Learning to unravel an opponent's weave mid-cast. This requires fast reflexes and excellent aetheric sensing.

### Year 4 & 5: C.R.A. Preparation
Practical dueling scenarios, enduring simulated void-storms, and mastering the Patronus-equivalent: The Luminous Guardian weave.

### Year 6 & 7: M.A.T. Level Defense
Advanced tactical combat, understanding the deep lore of the Void Wastes, and practical field trips to the border wards to reinforce the shields.

## FLORA RESONANCE (Botanist Thorne)

Study aether-infused plants and fungi.

### Year 1: Basic Cultivation
Caring for Luminescent Moss and learning to harvest safely.

### Year 2: Defensive Flora
Handling Shrieking Vines and Snare-Weeds. Students will learn the pacifying frequencies.

### Year 3: Alchemical Ingredients
Growing and harvesting rare plants needed for advanced alchemy. Includes field trips to the deeper greenhouses.

### Year 4 & 5: C.R.A. Preparation

Understanding the ecological impact of aether on plant life.

### Year 6 & 7: M.A.T. Level Flora

Genetic manipulation of magical plants to create new hybrid species.

## KINETICS & INFUSIONS (Weaver Flit)

Master the art of manipulating kinetic energy and imbuing objects.

### Year 1: Levitation and Propulsion

The basic 'Lift and Push' weaves. Master making a feather float before trying to lift a boulder.

### Year 2: Object Infusion

Imbuing a physical object with a permanent minor effect (e.g., a self-sweeping broom, a glowing rock).

### Year 3: Temperature and Light Control

Weaves that manipulate ambient thermal and photon energy.

### Year 4 & 5: C.R.A. Preparation

Complex kinetic chains (e.g., unlocking a complex mechanical door, repairing shattered glass).

### Year 6 & 7: M.A.T. Level Kinetics

Spatial manipulation. The theory behind short-range teleportation (Apparition equivalent).
